

Looping Through a String

python

 Copy  Edit

```
for letter in chai: print(letter)
```

This prints each character in the string `chai` on a new line.

IndentationError: unexpected indent

You encountered this:

python

 Copy  Edit

```
print(letter) IndentationError: unexpected indent
```

This happened because you likely pressed **Tab** or added extra spaces inconsistently before `print(letter)` inside the loop. In Python, indentation **must be consistent** — either use 4 spaces or 1 tab, but not both.

You Fixed It

After correcting the indentation, your loop worked as expected:

CSS

 Copy  Edit

```
M
a
s
a
l
a

C
h
```
